NUTRITION,
FOOD SCIENCE AND TECHNOLOGY
&
HEALTH SCIENCES

prepared by

UNESCO
in cooperation with the
International Union of Nutritional Sciences,

Division of Basic Education
UNESCO/ Paris
December 1992

ED/92/WS/20
UNESCO in cooperation with the International Union of Nutritional Sciences (IUNS) has compiled this LATIN AMERICA AND CARIBBEAN COMPENDIUM OF HIGHER EDUCATION PROGRAMMES IN FAMILY & HOME ECONOMICS, NUTRITION, FOOD SCIENCE AND TECHNOLOGY AND HEALTH SCIENCES.¹ The purpose of this compendium is to offer Latin American and Caribbean Member States of UNESCO information on available degree programmes in these areas in order to assist interested students in their search for higher education and to provide institutions themselves with facts and information on similar training programmes offered elsewhere in the region. Three other compendiums of the same nature are available for Africa, Asia and the Pacific and the Arab States.

UNESCO receives innumerable requests from students for guidance on training in fields concerned with the home and family environment, food and nutrition and health. This compendium will be expanded as necessary after its first diffusion based on comments and information provided by readers. In any future edition, we hope to provide qualitative information on the content and substance of training programmes in order to describe how higher education programmes are responding to prevailing human development concerns.

The information reported on each institution has been obtained from published international sources and, wherever possible, from the institution itself. The following references were consulted:

While compiling this compendium, we communicated several times with each institution and we are especially pleased with the cooperative spirit of

¹ The International Union of Nutritional Sciences is a non-governmental organisation established to promote international cooperation in the scientific study of nutrition and its application; to encourage research and the exchange of scientific information in nutritional sciences; to provide a means of communication with other organizations; and to encourage participation in the activities of the International Union of Scientific Councils (ICSU) of which the Union is a member.
exchange expressed by those contacted. Although we have gathered more information on some institutions and less on others, for consistency reasons, we have standardized the presentation of information.

The institution name appears on the top of each page and at the bottom right side of each page there is an indication of when the data on that institution was last updated. The fields of study offered are indicated according to the way that they are designated by the particular institution. Here, we have tried to identify institutions in each country with fields of study most closely related to home economics, food and nutrition and health sciences. 2 Student enrolment applies to the particular Centre, Faculty or Department as specified in the institution entry at the top of each page.

Information on student enrolment and school fees were obtained from the references cited above or the institution itself (in this case, the figures apply to the year in which the information was updated by the institution). Invariably, with each new academic year there will be fluctuations. This information should be regarded as indicative.

An important number of relevant institutions are found in Brazil, Columbia, Mexico, Argentina and Chile and many of these institutions offer post-graduate degree programmes. The University of the West Indies (Mona Campus) serves 14 countries in the Caribbean and Latin America.

This compendium has been a collaborative project with the International Union of Nutritional Sciences and UNESCO. Dr. Rajammal P. Devadas, Vice Chancellor of the Avinashiingam Institute for Home Science and Higher Education for Women (Deemed University), Coimbatore, India, serves as Chairperson of the IUNS Committee associated with this effort. UNESCO as part of its Individual Internship Programme has offered numerous young professionals the opportunity to contribute to this information exchange project. 3 Ms. Wendy Heilman started the initial research on the four compendiums. Ms. Vanessa Holtzer and Ms. Ana Michel provided further assistance with the data collection and processing. Ms. Janelle Miller assisted with finalization of all four compendiums. 4

2 In Cuba, the closest field of study identified to these areas is public health.

3 The UNESCO Individual Internship Programme has, since its inception, been of mutual benefit to UNESCO and participating interns. The programme offers young professionals the opportunity to work under supervision within the Organization in areas directly related to education, science, the social and human sciences, culture and communication. Interns volunteer up to three months of their time to the programme in exchange for the experience gained.

4 Special appreciation is given to Ms. Josephine Chona and Ms. Allison Hannigan for their computer assistance with data entry. Ms. Chona was especially helpful to the Interns throughout the preparation process.
