Hydrology in a Changing World: Environmental and Human Dimensions
Recent IAHS Publications

Editors: Attilio Castellanin, Serena Ceola, Elena Toth & Alberto Montanari
A selection of 89 peer-reviewed papers by research groups active in five continents addressing topics associated with water resources assessment and management in a changing environment, and particularly the two-way interaction between water and society, the focus of the Panta Rhei IAHS research initiative. Water resources systems, catchment hydrology, eco-hydrology, groundwater hydrology, water security and socio-hydrology are driving scientific areas, which are covered.
Publ. 364 2014 978-1-907161-42-1 548 + xii pp. £118

Considering Hydrological Change in Reservoir Planning and Management
Editor: Andreas Schumann
Co-editors: Vladimir Belyaev, Emma Gargouri, George Kuczera, Gil Mahé & Stephen Malory
An excellent overview of contemporary problems in reservoir management, from planning aspects of large multi-objective reservoirs and of small farm dams in Africa, to governmental matters, to sedimentation issues, to climate change impacts. Given the stochastic nature of hydrological conditions, the limited information available to characterize it and the multi-faceted targets of reservoir management, reservoir planning and operation are ambitious challenges for hydrologists and water managers.
Publ. 362 2013 978-1-907161-40-7 214 + x pp. £61

Understanding Freshwater Quality Problems in a Changing World
Edited by Berit Arheimer
Co-edited by Adrian Collins, Valentina Krysanova, Elango Lakshmanan, Michel Meybeck & Mike Stone
Contributions from each continent provide a review of water quality problems worldwide, with articles describing present regional/local freshwater quality status and highlighting research needs. How the situation may develop into the future, given on-going changes in environment and society, is discussed. Questions addressed include: How to understand the behaviours of changing hydrological systems and impacts on freshwater quality? How to effectively bring together theoretical and experimental hydrology, and new measurement techniques to advance knowledge of water quality processes for the future?
Publ. 361 2013 978-1-907161-39-1 372 + xii pp. £87

Deltas: Landforms, Ecosystems and Human Activities
Editors: Gordon Young & Gerardo M. E. Perillo
Associate Editors: H. Aksoy, J. Bagen, A. Geffari, G. Mahé, P. Marsh & H. Stavenije
Deltas pose great challenges, whether marine or lacustrine, as regions of purely natural conditions or of intense human activity set in the context of complex and often rapidly changing natural environments. Physically they are complex systems, the end-products of catchment processes involving water supply, sediment delivery and water quality – elements that are fast changing over time as a result both of human influences and change in climatic drivers. The contributions result from a joint symposium of IAHS) and IAPSO.
Publ. 358 2013 978-1-907161-36-0 246 + x pp. £65

Floods: From Risk to Opportunity
Edited by A. Chavoshian & K. Takeuchi
Co-edited by X. Cheng, E. Plate, S. Simonovic, S. Uhlenbrook & N. Wright
A paradigm shift from focusing on emergency response and recovery to flood risk management is required to build the capacity necessary to cope with floods. The process should be supported by vulnerability monitoring and development of tools such as standard measures of risk and preparedness in an integrated approach to improve capacity to deal with floods, taking advantage of their benefits while minimizing their social, economic and environmental risks. The papers, selected from ICFM5, cover flood risk management, disaster management, forecasting and early warning, and management in different regions.
Publ. 357 2013 978-1-907161-35-3 470 + x pp. £96

BENCHMARK PAPERS IN HYDROLOGY
The IAHS Series that collects together, by theme in stand-alone volumes, the papers that provided the scientific foundations for hydrology.

HYDRO-GEOMORPHOLOGY, EROSION AND SEDIMENTATION
Michael J. Kirkby
Provides a systematic analysis of the relationships between hydrology and geomorphology, with commentaries on the papers that have been most influential in developments at the hydrology-geomorphology interface.
BM6 2011 978-1-907161-14-8 Hardback, 640 pp. £70

FOREST HYDROLOGY
David R. DeWalle
The papers selected include the early review of forest and water by Zon (1927) and the Wagon Wheel Gap paired watershed study (Bates & Henry, 1928) report, but covers all aspects from evapotranspiration to water yields and quality, to soil erosion.
BM7 2011 978-1-907161-17-9 Hardback, 474 pp. £65

ISOTYPE HYDROLOGY
P. K. Aggarwal, K. O. Fröhlich, J. R. Gat & R. Gonfiantini
The potential of using stable isotopes of water was recognized in the 1930s, but not fully explored until the 1950s. Improvements in measurement techniques have facilitated use of isotopes in many contexts, and isotope hydrology has become mainstream.
BM8 2012 978-1-907161-29-2 Hardback, 486 pp. £70

PALAEOHYDROLOGY
Victor R. Baker
Reproduces the Benchmark Papers that have, and still influence palaeohydrological research, with commentaries on their significance.
BM9 2014 978-1-907161-30-8 Hardback, 494 pp. £75

Contents

Preface by Trevor M. Daniell v

Over 25 years of FRIEND-Water: an overview Henny A. J. Van Lanen, Siegfried Demuth, Trevor Daniell, David M. Hannah, Gregor Laaha, Gil Mahé & Lena M. Tallaksen 1

1 Trends in hydrological regimes and extremes 11

Regional assessment of low flow processes and prediction methods across European regimes Gregor Laaha, Anne F. van Loon, Claire Lang Delus & Daniel Koffler

Progressive aridity impact on the hydrological regime in the Volta River basin in Benin (West Africa) Henri S. V. Totin, Arnaud Zannou, Ernest Amoussou, Abel Afouda & Michel Boko 17

Multi-annual droughts in the water-stressed English Lowlands: long-term variability and climate drivers Jamie Hannaford, Chris K. Folland, Mike C. Kendon, & John P. Bloomfield 23

Synthesizing changes in low flows from observations and models across scales Kerstin Stahl, Jean-Philippe Vidal, Jamie Hannaford, Christel Prudhomme, Gregor Laaha & Lena M. Tallaksen 30

Understanding and adapting to flood risk in a variable and changing climate Anthony S. Kiem 36

Trends in floods in small Norwegian catchments – instantaneous vs daily peaks Donna Wilson, Hege Hisdal & Deborah Lawrence 42

Climate change impact on flood generation process Biljana Radojevic, Pascal Breil & Dejan Dimkic 48

Future low flows and hydrological drought: how certain are these for Europe? Marcel A. A. Alderlieste, Henny A. J. Van Lanen & Niko Wanders 60

Do large-scale models capture reported drought events? Marjolein H. J. Van Huijgevoort, Henny A. J. Van Lanen, Adriaan J. Teuling & Remko Uijlenhoet 66

Analyse des périodes sèches dans le bassin d’Ichkeul (Tunisie) à partir de données journalières de pluviométrie / Analysis of dry spells in the Ichkeul basin (Tunisia) using daily rainfall data Majid Mathlouthi & Fethi Lebdi 72
Changes of drought characteristics in small Czech and Slovakian catchments projected by the CMIP5 GCM ensemble Martin Hanel, Adam Vizina, Marta Martínková, Stanislav Horáček, Diana Porubská, Marián Fendek & Miriam Fendeková

Impact of land-use change on the hydrology of North Lao PDR watersheds Emmanuel Mouche, François Moussu, Claude Mügler, Olivier Ribolzi, Christian Valentin, Oloth Sengtahevanghoung & Guillaume Lacombe

Assessment of wildfire impact on hydrological extremes in eastern Siberia Lyudmila Lebedeva & Olga Semenova & Nina Volkova

The correlation between variations of climatic factors and zonal runoff of mountain rivers Mikhail Bolgov & Marina Trubetskova

Linking variations in large-scale climatic circulation and high groundwater levels in southern England David A. Lavers, David M. Hannah & Chris Bradley

Rainfall regime evolution and drought forecasting in eastern Algeria Mohamed Meddi & Abdelwahab Rahmouni

Up-to-date climate forced seasonal flood changes (the case study for the European part of Russia) Natalia Frolova, Maria Kireeva, Dmitry Nesterenko, Svetlana Agafonova & Pavel Tersky

Improvement of reservoir operation by hybrid optimization algorithm: case study of HuongDien Reservoir, Vietnam Van Hoa Ho & Joong Hoon Kim

Optimal reservoir operation strategy for balancing ecosystem and human needs Fi-John Chang, Wen-Ping Tsai, Yu-Chung Wang, Pin-An Chen, Li-Chiu Chang, Alexandra Coynel & Georges Vachaud

Recent trends in monthly temperature and precipitation patterns in Europe Irene B. Nilsen, Anne K. Fleig, Lena M. Tallaksen & Hege Hisdal

Large-scale climate control on lake inflow in the Waitaki basin, New Zealand Daniel G. Kingston, Clare S. Webster & Pascal Sirguey

Sensitivity analysis of hydrological modelling to climate forcing in a semi-arid mountainous catchment D. Ruelland, A. Dezetter & P. Hublart

Prediction of water resources in the Chao Phraya River Basin, Thailand Supattana Wichakul, Yasuto Tachikawa, Michiharu Shiiba & Kazuaki Yorozu

Modelling runoff and its components in Himalayan basins Hong Li, Stein Beldring, Chong-Yu Xu & Sharad K. Jain

Statistical analysis of river discharge projected using the MRI-AGCM3.2S dataset in Indochina Peninsula D. T. Duong, Y. Tachikawa, M. Shiiba & K. Yorozu
2 Water resources and prospective scenarios

A multi-tracer approach to understand the hydrogeochemical functioning of a coastal aquifer located in NE Tunisia. Fethi Lachaal, Anis Chekirbane, Ammar Mlayah, Bilel Hjiri & Jamila Tarhouni

Assessing the capacity to meet irrigation water needs for viticulture under climate variability in the Chilean Andes. P. Hublart, D. Ruelland, A. Dezetter & H. Jourde

Present-day surface and subsurface water resources of European Russia: conditions, use and forecast. R. Dzhamalov, N. Frolova, M. Kireeva & E. Rets

La prospective territoriale, un outil de réflexion sur la gestion de l’eau du bassin de la Durance en 2050 / The territorial foresight, a reflection framework for water management planning in the Durance River basin in 2050. R. Samie, C. Monteil, Y. Arama, H. Bouscasse & E. Sauquet

Modifications des températures et des précipitations sur le Bani, un sous-bassin du fleuve Niger / Changes in temperature and precipitation in the Bani watershed, a sub-basin of the Niger River. Jean-Emmanuel Paturel & Malicki Zorom

Climate change and debris flow: hazards maps in Matucana village under IPCC scenarios. Juan W. Cabrera Cabrera & Leonardo F. Castillo Navarro

Characterizing infiltration of a tropical watershed from ALOSPALSAR data using the Green-Ampt infiltration model. Nor Liyana Mohammad Khan, Muhamad Askari & Ab. Latif Ibrahim
Projected climate change impacts on water resources in northern Morocco with an ensemble of regional climate models  
*Y. Tramblay, D. Ruelland, R. Bouaicha & E. Servat*

Modèle conceptuel de l’aquifère du Continental Terminal d’Abidjan / Conceptual model of Abidjan Continental Terminal aquifer  
*Auguste K. Kouassi, Francis W. Kouassi, Jules O. M. Mangoua & Issiaka Savane*

Characterization and evaluation of the confined limestone aquifer in Kuwait  
*Fawzia M. Al-Ruwaih*

Etude géochimique et isotopique d’un aquifère phréatique côtier anthropisé: Nappe de Oussja-Ghar El Melah (Tunisie) / Geochemical and isotope study of coastal anthropogenic phreatic groundwater: Oussja-Ghar El Melah aquifer (Tunisia)  
*Safouan Ben Ammar, Jean-Denis Taupin, Kamel Zouari, Mohamed Khouatmia & Mohamed Ben Assi*

Choosing metrics that matter – quantifying performance to help address reservoir operation challenges in Kenya’s Tana basin  
*Anthony P. Hurford & Julien J. Harou*

Environmental and geomatics assessment of the Ha Thanh basin to hydrological hazards in central Vietnam  
*Stephane Grivel, Anh Tu Ngo, Jean-Marc Zaninetti & Thi Van Luong*

Forecasting and mitigation of flooding in a Mediterranean karstic watershed  

3 Erosion and sediment transfer processes and trends

Using $^{137}$Cs and $^{210}$Pb$_{ex}$ measurements to document erosion rates for different time windows in a small catchment in southern Italy  
*Paolo Porto & Desmond E. Walling*

Lessons from long-term monitoring of soil erosion in three southeast Asian agricultural catchments undergoing rapid land-use changes  

Study of the relationship between sediment transport and rainfall extremes in the watershed of the wadi Mina (northwest Algeria)  
*F. Hallouz, M. Meddi & G. Mahe*
“Blue-green” corridors as a tool for erosion and stream control in highly urbanized areas – case study of Belgrade city  Ratko Ristić, Boris Radić, Goran Trivan & Ivan Malušević

4 Hydrological databases: how to cope with future questions

Ensuring hydrometric data are fit-for-purpose through a national Service Level Agreement  Katie Muchan & Harry Dixon

Architecture of environmental information systems applied to scientific observatories: examples of Carnoulès and MEDCYSS observatories  J. F. Boyer, E. Servat, C. Casiot & H. Jourde

Cooperative WebGIS interactive information systems for water resources data management  Charalampos Skoulkarakis, Jacques Ganoulis, Nikolaos Karapetsas, Fotis Katsogiannos & Georgios Zalidis

Towards a pan-European assessment of low flow indices Claire Lang Delus, Gregor Laaha, Daniel Koffler, Kerstin Stahl, Hege Hisdal, Christel Prudhomme, Miriam Fendekova & Wojciech Jakubowski

Selecting an optimal climatic dataset for integrated modelling of the Ebro hydrosystem  A. Dezetter, J. Fabre, D. Ruelland & E. Servat

Growing season length and rainfall extremes analysis in Malawi  Cosmo Ngongondo, Lena M. Tallaksen & Chong-Yu Xu

Minimizing geopolitically ungauged catchment area of transboundary river basins to support disaster risk reduction  Kelly M. Kibler

Probability distribution of rainfall in the Bia watershed: contribution of Markov chains  Meledje N’diaye Hermann, Kouassi Kouakou Lazare, Ngo Yao Alexis & Savane Issiaka

Assessment of rainfall observed by weather radar and its effect on hydrological simulation performance  Nghi Vu Van, Nhung Tran Thi & Quyet Le Dinh

Predicting soil water retention characteristics for Vietnam Mekong Delta soils  Nguyen M. Phuong, Le V. Khoa & Wim Cornelis
### 5 Regional observational-hydrological modelling frameworks

Connecting streamflow and atmospheric conditions in Europe: state-of-the-art review and future directions  
*David M. Hannah, Anne K. Fleig, Daniel G. Kingston, James H. Stagge & Donna Wilson*

Water budget in the Amazon basin and impacts on flood modelling  
*Augusto Getirana, Sujay Kumar, Christa Peters-Lidard & Kristi Arsenault*

Measurement, modelling and analysis of hydrological and hydrogeological processes and trends in a marsh area  
*Branka Bracic Zeleznik & Lidija Globevnik*

From drought to floods in 2012: operations and early warning services in the UK  
*Charlie Pilling, David Price, Adrian Wynn, Andrew Lane, Steven J. Cole, Robert J. Moore & Timothy Aldridge*

Les lacs collinaires en Tunisie: technique de conservation des eaux et du sol  
*Hamadi Habaieb, Taoufik Hermassi, Slaheddine Ghedaoui & Issam Anatar*

Application of hydrological model to evaluate the potential hydro energy in a mountainous small river basin of Japan  
*Kazumasa Fujimura, Masahiro Murakami, Yoshihiko Iseri & Shinjiro Kanae*

Influence des activités anthropiques sur le régime hydrologique du fleuve Logone de 1960 à 2000 / Human activities influence on the hydrological regime of the Logone River basin from 1960 to 2000  
*N. Tellro Waï, B. Ngounou Ngatcha, G. Mahe, J. C. Doumnang, F. Delclaux, N. Goundoul & P. Genthon*

Estimation of runoff curve numbers using a physically-based approach of preferential flow modelling  
*Pori Das, Aminul Islam, Subashisa Dutta, Amit K. Dubey & Rupak Sarkar*

### 6 Changes in ecological flows and coastal ecohydrology

Hydrological regime of a tidal system in the Red River Delta, northern Vietnam  
*Luu Thi Nguyet Minh, Didier Orange, Tran Hong Thai, Josette Garnier, Le Lan Anh & Trinh Anh Duc*

Measuring impact of water management on ecological health of a river: Poudre River, Colorado, USA  
*Robert T. Milhous*

Impact of climate change on aquatic ecosystems along the Asse River network  
*Thomas Cipriani, François Tilmant, Flora Branger, Eric Sauquet & Thibault Datry*

Ecological flow for integrated planning of small hydropower plants: a case study from Greece  
*Thomas Patsialis, Charalampos Skoulkaris & Jacques Ganoulis*
