

Figures

1.1: World population and freshwater use	13
1.2: World population prospects	13
1.3: Actual and projected urban population in different regions of the world in 1950, 2000 and 2030	14
1.4: Urban and rural populations, less developed countries, 1950 to 2030	14
<hr/>	
3.1: Translation of an information need into policy-oriented information using variables, indicators and indices	34
3.2: Calculated available water resources, water demand, internal renewable water resources and water supply	35
3.3: Development of consumable fish as a percentage of the minimum biomass needed for a sustainable renewal of the fish population	36
3.4: Annual freshwater demand in different regions of the world for the current situation and for two alternative projections for the year 2025	36
3.5: Overview of the history and development of sustainability indicators	38
3.6: Schematic representation of a guideline for indicator development	41
3.7: Values of the Water Stress Index (WSI) presented on four different spatial scales: country, grid cell, region and watershed	53
3.8: A time series of the oxygen concentration and living organisms in the Rhine River since 1900	54
3.9: Nile basin map showing climatic moisture index	56
3.10: Nile basin map showing indicator on people with drought stress threshold	56
<hr/>	
4.1: The global hydrological network by type	68
4.2: Water availability versus population	69
4.3: Typical groundwater flow regimes and residence times under semi-arid climatic conditions	80
<hr/>	
5.1: Transmission pathways of faecal-oral diseases	105
5.2: Water supply, distribution of unserved populations	109
5.3: Sanitation, distribution of unserved populations	109
5.4: Actual and target water supply coverage	111
5.5: Actual and target sanitation coverage	111
<hr/>	
6.1: Emissions of water pollutants by sector	134
6.2: Biological quality of United Kingdom rivers, 1990-2000	136
6.3: Proportion of United States species at risk or extinct, by taxonomic grouping	142
6.4: Living Planet index 1999: inland waters	143
6.5: Changes in lake condition 1960s-1990s	143
<hr/>	
7.1: Examples of causes for the prevalence of diarrhoeal diseases in a squatter settlement	169
7.2: The proportion of households in major cities connected to piped water and sewers	173
<hr/>	
8.1: Food prices and investment in irrigation and drainage	194
8.2: Per capita food consumption from 1965 to 2030	200
8.3: Yields and water requirements of irrigated and non-irrigated agriculture	205
8.4: Competing uses of water in the Zhanghe irrigation district, China	205
8.5: Irrigated area as proportion of irrigation potential in developing countries	206
8.6: Irrigation and water resources: actual (1999) and predicted (2030) withdrawals	207
8.7: Progress towards the World Food Summit target	211
8.8: Proportion of undernourished people in developing countries, 1990-1992 and 1997-1998	212

9.1: Competing water uses for main income groups of countries	228
9.2: Contribution of main industrial sectors to the production of organic water pollutant	229
9.3: Industrial Value Added from water use for main income classes of countries	237
10.1: World's electricity production	255
10.2: Installed hydro capacity (all schemes) at the end of 1996 – regional distribution	256
11.1: Types and distribution of water-related natural disasters, 1990–2001	272
11.2: Trends in major natural catastrophes, 1950–2000	273
11.3: Framework for risk assessment	281
11.4: Trends in food emergencies, 1981–2001	286
12.1: Power and authority of different institutional mechanisms	299
12.2: Events related to transboundary water basins	313
13.1: Value of water	329
14.1: Gross enrolment ratio in primary education	350
14.2: Estimated illiteracy rates: total for male and female aged 15 years and older	351
14.3: Number of scientists and engineers per 100,000 inhabitants, GDP per capita (PPP in US\$), Human Development Index value and R&D expenditure	359
14.4: Institutes offering water-related subjects in higher education	361
14.5: Communications (television, radio, newspapers) per 1,000 inhabitants	363
14.6: Main telephone lines and Internet users per 1,000 inhabitants	364
14.7: ICT expenditure as percentage of GDP	265
15.1: Framework for moving towards IWRM	376
17.1: Unemployment and average income per month in Estonian counties bordering Lake Peipsi	406
17.2: Unemployment in the Pskov region between 1997–2001	406
17.3: Land use in the Lake Peipsi basin	407
17.4: Ratio of phosphorus pollution load by country and source	409
17.5: Ratio of nitrogen pollution load by country and source	409
17.6: Comparison of annual phosphorus loads by source between 1989 and 1998	409
17.7: Comparison of annual nitrogen loads by source between 1989 and 1998	409
19.1: Evolution in water quality	437
19.2: Water legislation in France	440
21.1: Distribution of the active working population of Bolivia and Peru	469
21.2: ALT structure	475
21.3: Chain of causality	479
22.1: Variation in river water quality – biological oxygen demand (BOD) levels	487
22.2: Variation in the chemical oxygen demand (COD) discharge load by sector in Tokyo bay	487
22.3: Rate of ground subsidence in cm/year	488
22.4: Revision of the River Law	492
22.5: Expression of the safety degree	494

22.6: Expression of the safety degree with a time variable	494
22.7: Effect of hazard maps on public safety	496
<hr/>	
23.1: Multiple burdens of water poverty	504
23.2: Regional environmental trends	510
23.3: Comparison of progress in implementing Chapter 18 of Agenda 21 by region	520

Maps

1.1: Internal renewable water resources generated within a country, on a per capita basis, circa 1995	11
<hr/>	
4.1: The long-term average water resources according to drainage basins	75
4.2: Mean annual precipitation	77
4.3: Groundwater resources of the world	79
4.4: Long-term average runoff on a global grid	84
4.5: Sediment load by basin	88
<hr/>	
6.1: Relative naturalness of land in major world river basins	139
<hr/>	
7.1: Water stress in regions around megacities	160
<hr/>	
8.1: Area equipped for irrigation as percentage of cultivated land by country (1998)	207
8.2: Agricultural water withdrawals as percentage of renewable water resources (1998)	208
8.3: Percentage of undernourished people by country (1998)	212
<hr/>	
9.1: Water withdrawals for manufacturing industries according to drainage basins	238
<hr/>	
10.1: Proportion of hydropower electricity generation per country	256
<hr/>	
12.1: Drainage basins under high or medium stress and the sector that uses the most water	295
12.2: Country dependence on water resources inflow from neighbouring countries	312
12.3: Transboundary basins of the world and the number of associated treaties	313
12.4: Transboundary aquifers in northern Africa	317
12.5: Status of cooperation in transboundary river basins	320
<hr/>	
16.1: Chao Phraya River basin: locator map	390
16.2: Chao Phraya River basin map	391
<hr/>	
17.1: Lake Peipsi/Chudskoe-Pskovskoe: locator map	404
17.2: Lake Peipsi/Chudskoe-Pskovskoe: basin map	405
<hr/>	
18.1: Ruhuna basins: locator map	418
18.2: Ruhuna basins map	419
18.3: Major land covers and uses in the Ruhuna basins	419

19.1: Seine-Normandy basin: locator map	432
19.2: Seine-Normandy basin map	433
19.1: Water quality in the Seine-Normandy basin	435
<hr/>	
20.1: Senegal River basin: locator map	450
20.2: Senegal River basin map	451
<hr/>	
21.1: Lake Titicaca basin: locator map	466
21.2: Lake Titicaca basin map	466
21.3: Distribution of groundwater in the TDPS system	470
21.3: Incidence of extreme events: frost	472
21.4: Incidence of extreme events: precipitation during periods of drought	472
<hr/>	
22.1: Greater Tokyo: locator map	484
22.2: Greater Tokyo map	484
22.5: Proposed new water quality indicator for recreational use	495

Boxes

1.1: <i>Vision 21</i> – water supply and sanitation targets	8
<hr/>	
3.1: The Water Poverty Index as an illustration of the difference between variables, indicators and index	34
3.2: Use of species as indicators for ecosystems quality	36
3.3: Overview of major indicator development efforts	42
3.4: Indicators for flood risk and water quality in Greater Tokyo	43
3.5: Achievements	58
<hr/>	
5.1: Cholera in 2001	102
5.2: The compounded malaria impact of microdams in Ethiopia	107
5.3: The role of improved water supply in the eradication of Guinea worm infection	114
5.4: Effects of improved water supply and sanitation on global problem of blindness	115
5.5: Freshwater cyanobacterial toxins – an emerging dam-related health issue	118
5.6: Human rights to water	121
<hr/>	
6.1: Draining wetlands for malaria control: a conflict of interests?	133
6.2: Non-native species	138
6.3: Protecting ecosystems in the Lake Pskovkoe watershed	145
6.4: Lake Titicaca – a transboundary Ramsar site of vulnerable ecosystems and ancient cultures	147
6.5: International instruments for protecting ecosystems	148
6.6: Taking hidden costs and benefits into account	149
6.7: The ‘Green Corridor’ – floodplain restoration along the Danube Valley	150
6.8: The Edwards dam	150
<hr/>	
7.1: Singapore Public Utilities Board: reducing Unaccounted-for-Water	168
7.2: Deficiencies in provision for water and sanitation in cities in Bangladesh and Pakistan	171
7.3: Inadequacies in provision for water and sanitation in selected cities in Kenya and the United Republic of Tanzania	172
7.4: New York City – maximizing public participation while protecting water quality	178

7.5: Community toilets in Pune and other Indian cities	179
7.6: Karachi, Pakistan – Orangi Pilot Project: when the community takes charge	180
7.7: Urban sanitation micro-enterprises: the UN-Habitat Vacutug development project	181
<hr/>	
8.1: The right to food	193
8.2: Assessing freshwater needs for global food production	203
8.3: Potential for improvements in agricultural water use efficiency	209
8.4: Libya: the Great Man-Made River Project	210
8.5: Food security and its indicators	211
8.6: Water and food security in the Senegal River basin	214
8.7: Rice-fish farming in Lao People's Democratic Republic	215
8.8: Land ownership and economic independence	217
8.9: Use of wastewater for irrigation	219
8.10: Integrating irrigation, nutrition and health	220
<hr/>	
9.1: Industrial water pollution control in the Gulf of Guinea basin (western Africa)	231
9.2: Environmental management and pollution control in the Tisza River basin (eastern Europe)	232
9.3: Convention on cooperation for the protection and sustainable use of the Danube River (central-eastern Europe)	239
9.4: Regional African leather and footwear industry scheme	241
9.5: Impressive gains from cleaner food production in Viet Nam	242
9.6: Removal of barriers for cleaner artisanal gold mining	243
<hr/>	
10.1: World Commission on Dams (WCD) – of risks, rights and negotiated agreements	257
10.2: Large-scale hydropower in Asia	258
10.3: GAP – a paradigm shift in water resources development	259
10.4: Advantages and disadvantages of small-scale hydropower projects	260
10.5: Hydropower and social problems in the Ruhuna basins (Sri Lanka)	261
10.6: Hydropower in Nepal	262
10.7: Progress since Rio at a glance	265
<hr/>	
11.1: The Rhine Action Plan	274
11.2: Methodology and terminology adopted by the ISDR	279
11.3: Initiatives coping with water-related risks	280
11.4: Political economy	282
11.5: Comprehensive flood control measures in Japan	283
11.6: Evolution of responsibility for risk-based water resource management	285
11.7: Shared regional water resources in economies in transition	287
<hr/>	
12.1: Competition for water in Valle Province, Colombia	296
12.2: Drought conciliation in Japan	298
12.3: New technology helps share the resource in Saudi Arabia	298
12.4: Sharing water resources in the Seine-Normandy basin	300
12.5: Expanded freshwater programmes	301
12.6: International public law related to the non-navigational uses of shared water resources	302
12.7: Sharing water in the Senegal River basin	314
12.8: Water sharing as an instrument of regional integration – the Nile basin	315

Boxes by Region

Africa

Tables

1.1: Water, poverty and the Millennium Development Goals	9
1.2: Water pollutants by industrial sector	15
<hr/>	
3.1: Draft Logical Framework of the Global Water Partnership Framework for Action	39
3.2: Example of the use of the DPSIR framework on the basis of components of the Water Poverty Index (WPI)	45
3.3: Criteria for the selection of indicators	45
3.4: List of indicators used in the first edition of the WWDR and indicators that will be developed in the future	47
3.5: Sample of indicator values per country on water supply and sanitation	52
3.6: Overview of a number of indicators, their aims and the correct spatial scale of their use	52
<hr/>	
4.1: The distribution of water across the globe	68
4.2: Water availability per person per year	70
4.3: Some large aquifers of the world	79
4.4: Groundwater use for agricultural irrigation in selected nations	80
4.5: Groundwater exploitation and associated problems	81
4.6: The world's largest reservoirs	83
4.7: The largest rivers in the world by mean annual discharge with their loads	85
4.8: The chemical composition of average river water (concentration in milligrams/litre)	85
4.9: The world's major water quality issues	86
<hr/>	
5.1: Some water-associated diseases by cause and sex, estimates for 2001	104
5.2: Six scenarios of exposure to environmental faecal-oral pathogens	106

5.3: Africa, Asia, Latin America and the Caribbean: access to water supply and sanitation services by level of services – evolution during the last decade	109
5.4: Improved versus non-improved water supply and sanitation	113
6.1: Simplified classification of services provided by water ecosystems	132
6.2: Pressures on freshwater ecosystems	133
6.3: Types of pollutants affecting freshwater ecosystems	134
6.4: Quality indicators for classifying the ecological status of rivers	137
6.5: Water quality indicator values in selected countries	140
6.6: Numbers of threatened freshwater fish in selected countries	141
6.7: Threatened inland water species: a selection of species assessed by IUCN as Critically Endangered in 2000	142
6.8: Example of wetlands loss in arid Eurasia	144
6.9: Review of National Reports submitted to the Convention on Biological Diversity (CBD)	151
7.1: Distribution of urban population in more and less developed regions in 1975, 2000 and 2015	161
7.2: The world's largest cities in 2000	162
7.3: The proportion of urban populations with access to 'improved' water supply and sanitation, 2000	170
7.4: Comparing different approaches to demand-side water management in the household sector	183
8.1: National values of key indicators in securing the food supply	195
8.2: Per capita food consumption from 1965 to 2030 (kcal/person/day)	200
8.3: Water requirement equivalent of main food products	203
8.4: Water use efficiency in 1998 and 2030 (predicted) in ninety-three developing countries	208
9.1: Industrial water efficiency	235
10.1: Distribution of households with access to electricity in forty-three developing countries (in percentages)	253
10.2: End-use of energy for cooking and heating in rural Mexico (in percentages)	254
10.3: Deployment of hydropower	255
10.4: Advantages and disadvantages of hydropower	258
10.5: Advantages and disadvantages of various forms of energy	263
11.1: Major drought events and their consequences in the last forty years	275
11.2: Severe natural disasters and their effects since 1994	276
11.3: Risk linkages and integration	277
11.4: Examples of low-cost indicators focused on risk losses and progress of risk reduction	287
12.1: Transboundary river basins	304
13.1: Value of aquatic ecosystem water services	330
13.2: Yearly funding requirements for water supply and sanitation	334
13.3: Yearly future funding requirements by the entire water and sanitation sector (in billion US\$)	334
13.4: Situation of cost recovery in irrigation for selected countries	336
13.5: Comparison of water pricing in developed countries	338
13.6: The poor pay more	341
14.1: Increases and decreases in the number of hydrological observing stations in the world between 1974 and 1997	356

16.1: Hydrological characteristics of the Chao Phraya River basin	390
16.2: Population, per capita income and Gross Provincial Product (GDP) in the sub-basins in 1996	392
16.3: Annual average runoff in the sub-basins	393
16.4: Characteristics of major reservoirs	393
16.5: Groundwater storage and renewable water resource in the sub-basins	394
<hr/>	
17.1: Hydrological characteristics of the Lake Peipsi basin	404
17.2: Morphometric data on Lake Peipsi	404
<hr/>	
18.1: Hydrological characteristics of the Ruhuna basins	418
18.2: Comparison of basic hydrological parameters of sub-basins over a thirty-year time span	420
<hr/>	
19.1: Hydrological characteristics of the Seine-Normandy basin	432
<hr/>	
20.1: Hydrological characteristics of the Senegal River basin	450
20.2: Summary of physical data	450
20.3: Summary of socio-economic data in the OMVS member states	451
20.4: Water use by sector within the OMVS area (in millions m ³)	453
20.5: Seasonal changes in Senegal River discharge since 1951	453
<hr/>	
21.1: Hydrological characteristics of the Lake Titicaca basin	466
21.2: TDPS system size	467
21.3: TDPS population data	468
21.4: Population in main cities	468
21.5: Health data	468
21.6: Annual flow in ten control stations of Lake Titicaca and Desaguadero River	470
21.7: Water use in the TDPS system	473
<hr/>	
22.1: Hydrological characteristics of five river basins in Greater Tokyo	485
22.2: Water governance in Japan	490
<hr/>	
23.1: National reports submitted by member states through the UN CSD system	515
23.2: Summary of regional progress in implementation of Chapter 18 of Agenda 21	521
23.3: Summary of regional progress towards attaining Millennium Development Goal 7	526
23.4: Summary of regional progress towards attaining Millennium Development Goal 4	527
23.5: Summary of regional progress towards attaining Millennium Development Goal 1	528
23.7: Summary of national progress towards attainment of relevant Millennium Development Goals	529
